

ReporterPE - Oh what a wonderful Postexecutor

Of course it can display plain text.
Linebreaks and TABSTOPS are supported.

It can embed images from the local filesystem:

It can use Lobster _datas barcode function, or embed other base64 encoded image data.

Of course **styled** text also works.
Even in color.

Static Header

Plain text in a styled field inherits formatting instructions from the template. Linebreaks by new line or carriage return and TABSTOPS are not supported in a styled field...

Images from the web

Of course it is possible to use **Styled text in a table**.

Even in color.
